An Engineered Software Business

▶ PUMP-FLO INSIGHT FEATURES	
FEATURE	DETAILS
Pump Selector	Powering the PUMP-FLO Insight Pump Selector is the industry standard PUMP-FLO program. This technology is far superior to any program on the market today. Known as the industry leader based on its ease of use, speed of calculation and overall features and functionality. The PUMP-FLO Insight Pump Selector is a powerful software platform for users of all levels to make an intelligent pump selection and leverage PUMP-FLO eCatalog data.
Design Point Calculator	The PUMP-FLO Insight Total Head Calculator module is a powerful tool for users who don't already know their system design point. Using the THC users can calculate the total head for the system at the required flow rate, providing the information needed for detailed and accurate pump selection. These details help filter the search during the beginning stages of pump configuration.
Pricing Configuration	Sorting through complicated price books, product options, configuration rules, and discount structures is a very long and tedious process with a significant potential for mistakes. Companies must create a standard practice to allow reps and distributors to quickly and easily price and configure products and spare parts. By modelling your workflow in PUMP-FLO Insight you will keep the process consistent and efficient, simplifying complex configurations and eliminating between 40-80% of human errors.
Quotation / Proposal Generation	Once a product has been properly size and selected, it is important that your sales team and distributors have the tools to organize the additional documentation such as quotations, pump curve data sheets, BOMs, dimensional and cross sectional drawing, installation instructions, maintenance manuals, etc. The PUMP-FLO Insight's Quotation / Proposal module allows users to easily organize these important documents in order to generate an official proposal in only a few clicks.
Seamless Integration	PUMP-FLO Insight will seamlessly consolidate your existing business applications, maintaining all your important data in one place. Combine the power of PUMP-FLO Insight with your ERP, MRP, CAD and CRM applications. PUMP-FLO Insight also integrates with your brand, your website and even online shopping cart applications.
